

**Fox Deal is a Telegram-native advertising marketplace where advertisers and channel owners create, secure, and execute ad campaigns through an automated escrow system.**

Advertisers browse verified channels, fund campaigns through escrow, and track real-time performance.

Channel owners receive structured deal requests, publish ads automatically, and access full payment and click history, all inside Telegram.

## The Problem

Telegram advertising deals currently happen in private messages. There is no escrow protection, no verification of delivery, and no structured workflow. Advertisers risk losing funds. Channel owners risk non-payment. Everything is manual, fragmented, and trust-based which does not scale.

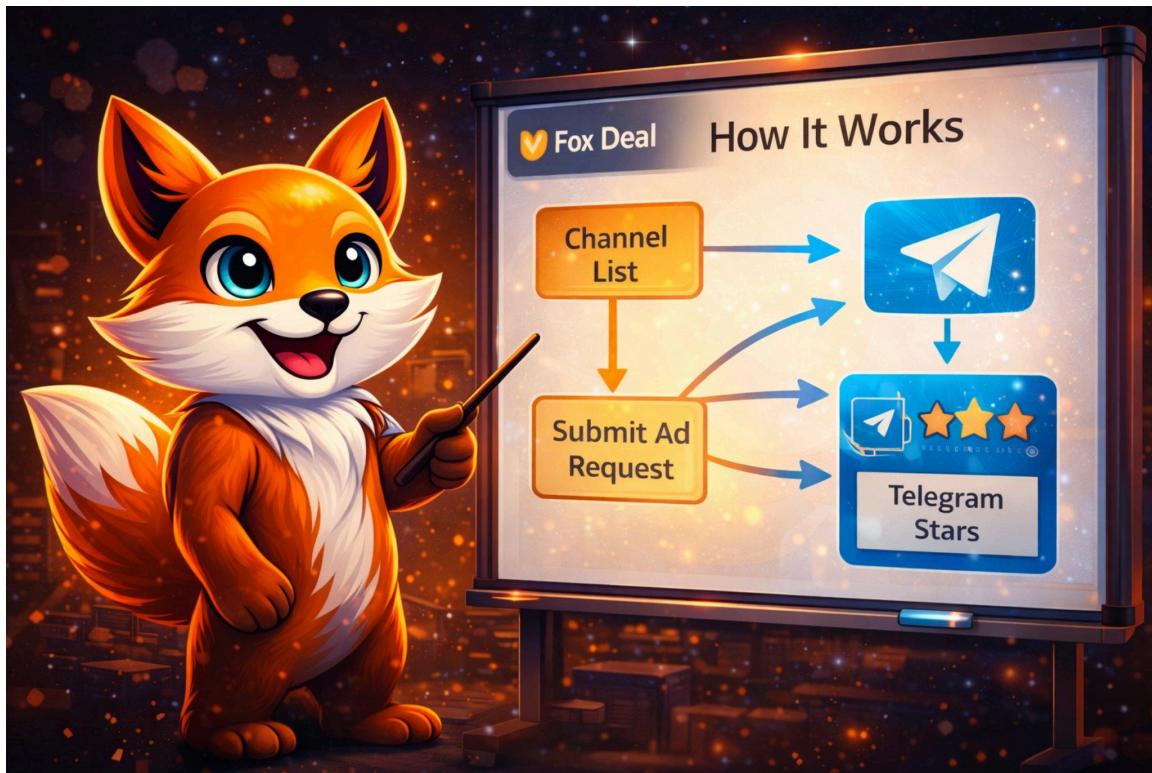

## The Solution

**Escrow-first. Data-backed. Telegram-native.**

- Advertisers lock funds before posting
- Once funded, campaigns are executed automatically without manual coordination
- Automated confirmation triggers secure payout
- Both sides see verified metrics and performance data
- Schedule post to channel

## How It Works

1. Channels list ad slots.
  2. Advertisers submit structured requests.
  3. Funds are locked in escrow.
  4. Post is published automatically.
  5. Payment is released upon confirmation.
- Simple. Secure. Automated.**

## Multi-Channel Campaigns

FoxDeal now supports **Multi-Channel Campaigns**: advertisers create **one ad creative** and target **multiple Telegram channels** in a single flow.

Behind the scenes, FoxDeal generates **one independent escrow deal per channel**, so approvals, payments, posting, and tracking stay **per-channel and transparent**.

### Why it matters

- **Faster launch:** submit once, publish across many channels
- **Less friction:** no repeating the same steps channel by channel
- **Full control:** each channel owner approves/rejects individually
- **Clear results:** status + performance tracked per channel in one dashboard

### Status tracking

Each channel deal moves through: **Waiting Approval** → **Approved** → **Paid** → **Posted** (or Rejected/Expired).

Advertisers get a unified campaign view while each channel keeps its normal workflow.

## What Makes Fox Deal Different

- Admin-reviewed channel and ads onboarding to maintain quality and trust
- Secure escrow with milestone-based release
- Transparent deal tracking inside Telegram
- **Full payment history & transaction dashboard** for channel owners
- **Real-time click tracking** visible to both advertiser and channel owner
- **Optional CPC model (pay-per-click campaigns)** with verified click tracking
- Verified channel metrics via Telegram
- Dispute resolution mechanism
- Performance-based channel scoring system
- One-tap, **no complexity**: escrow + posting + tracking inside Telegram

## Business Model

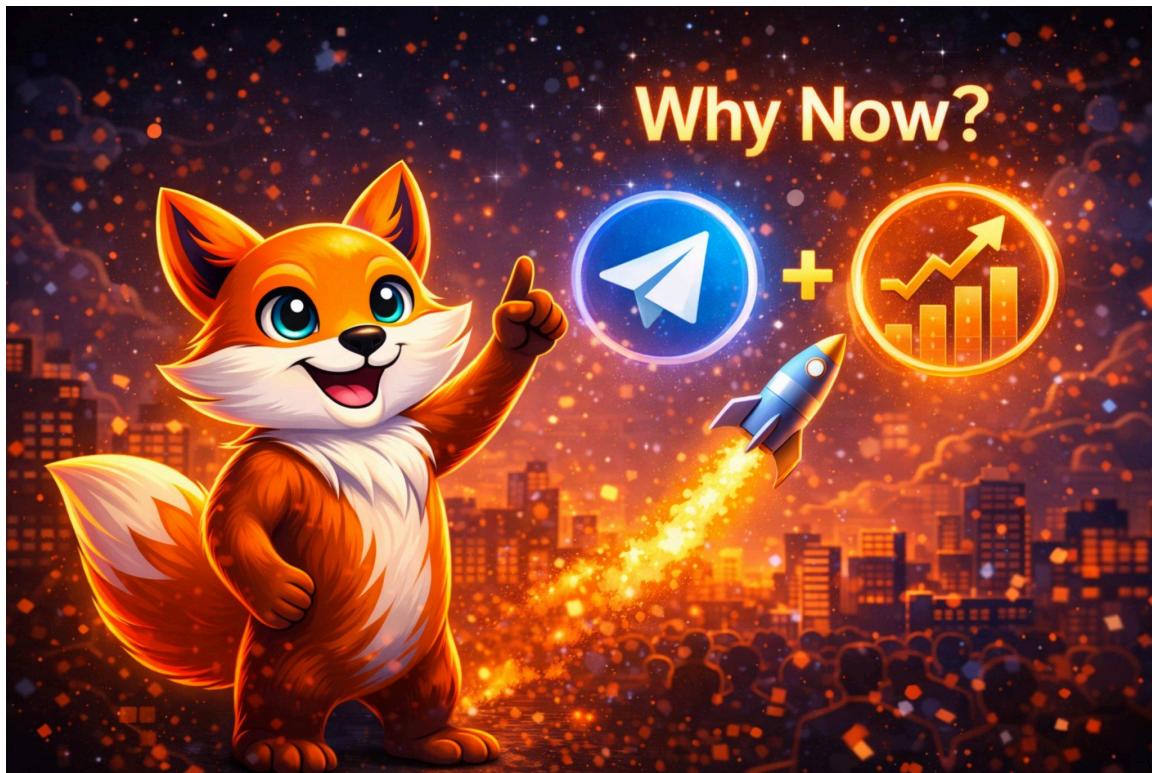

Revenue Streams:

- 5% transaction fee on every successful fixed-price escrow deal
- 5% fee on CPC campaign spend (pay-per-click model)
- Premium tools for channel owners (e.g., scheduled ad publishing, advanced visibility)
- Advanced analytics & performance dashboards (future upsell)

**Low-fee, high-volume marketplace model designed for scalable creator monetization.**

## Why Now

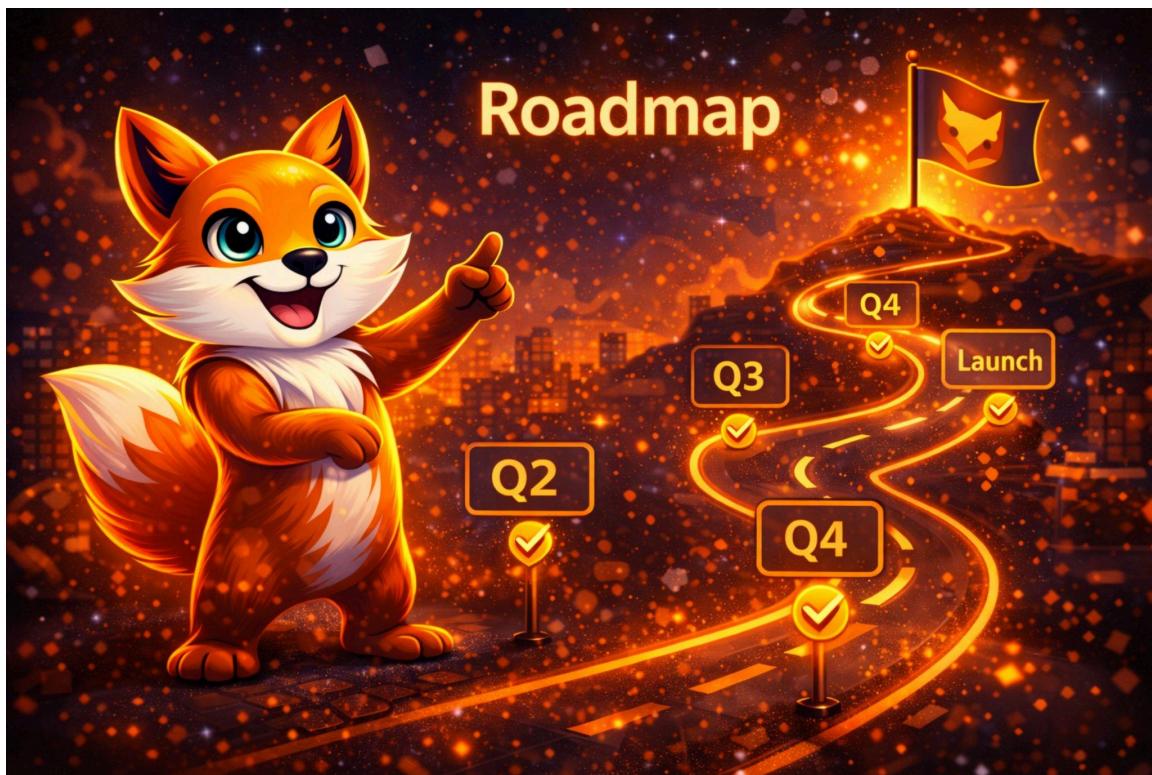

Telegram growth is accelerating. Ad budgets are shifting toward community platforms. Trust and fraud prevention are critical needs. Timing aligns perfectly for escrow infrastructure.

## Competitive Landscape

Existing solutions rely on manual coordination or simple directories. They lack escrow automation, verification, and structured workflows. Fox Deal differentiates through security and automation.

## Roadmap

Q2: MVP Launch

Q3: Escrow Automation + Verified Metrics

Q4: Performance-based ranking

Q5: Scale & Strategic Partnerships

Next: Analytics Suite & API integrations.

**Thank You**
